## Luna® Flex Fungicide Effectively Controls Apple Scab on Foliage and Fruits

Apple McIntosh; Trial conducted in North Rose, NY in 2020 by an independent research firm. For head-to-head comparison fungicides were applied as a full season program with seven repeated foliar applications. Nonionic surfactant was used with all spray applications. Please follow the label for rates and timings for commercial applications. Data recorded at 24 days after last application for leaf and fruit scab, and 53 days after last application for fruit scab control in storage. Means within category followed by the same letter are not significantly different according to Fisher's Protected LSD ( $P < 0.05$ )

## Luna® Flex Fungicide Effectively Controls Apple Scab

Results are the average of six trials conducted in 2021 in MI, NC, NY, OH, and PA. All treatments were three times in April-May; other fungicide applications in the programs were similar across all the treatments. Nonionic surfactant was used with all spray applications. Data was recorded in July-August. Means within category followed by the same letter are not significantly different according to Fisher's Protected LSD ( $P < 0.05$ )

**IMPORTANT:** This bulletin is not intended to provide adequate information for use of these products. Read the label before using these products. Observe all label directions and precautions while using these products.

**Luna Flex contains oil in the formulation. If tank-mixing Luna Flex with oil-sensitive products, read and follow their label restrictions. Do not apply in tank-mix with, or 7 days before or after an application of Captan.**
