FOR DISTRIBUTION AND USE ONLY IN THE STATE OF NEW YORK

FIFRA Section 2(ee) Recommendation: This recommendation is made as permitted under FIFRA Section 2(ee). It is a violation of federal law to use this product in a manner inconsistent with its label. This product bulletin should be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label. Please see Notes and Restrictions in this recommendation below.

DIRECTIONS FOR USE

GRAPE Including: American bunch grape, Muscadine grape and Vinifera grape.	
Pest Controlled	Rate fluid ounces/Acre
Japanese beetle	1.3 – 1.4
Pest Management	
Multicolored Asian lady beetle – MALB* (<i>Harmonia axyridis</i>)	1.0 – 1.4
Notes and Restrictions Pre-Harvest Interval (PHI): 0 day Minimum interval between applications: 14 days Maximum Admire® Pro allowed per crop season: 2.8 fluid ounces/Acre (0.1 lb AI/A) Admire® Pro may be applied by ground application only. *MALB is considered a beneficial, generalist predator of many insect pests, in many crops. However, in grape it can be considered a nuisance pest if MALB adults "infest" or harbor within clusters during harvest. Admire® Pro has been shown to be effective in temporarily removing MALB from grape clusters without significant mortality. Use lowest effective dose. Harvest should follow within 1 to 2 days of application. Applications Lower dosages of the rate-range for management of MALB should concentrate applications toward grape clusters.
