

Maximize Yield Potential and Quality with a Strong Finish

Cotton plants are poised to produce bolls from the day the seeds are planted to the day you harvest. Using plant growth regulators and harvest aids are critical for a successful crop.

For late season, utilizing Bayer harvest aid Finish® 6 PRO helps set the stage for a clean and efficient harvest with high-quality fiber and high yield potential.

Open Bolls Fast

- Opens bolls fast without the harsh side effect of desiccants and PPO-type defoliants.

Preserve Quality

- Fast opening reduces the amount of time lint is vulnerable to damage from wind and weather, preserving fiber quality and protecting profit potential.

Helps to Reduce Risk

- Fast, more gentle opening reduces the risk of leaf grade and color discounts. Finish® 6 PRO cotton defoliant is designed to deliver a clean, consistent drop of foliage with reduced leaf stick, which could lead to high-value cotton and improved profit potential.
