APPLICATION TABLE:

CROP/DISEASE	DOSAGE RATE	REMARKS
APPLES AND PEARS Scab (<i>Venturia</i> spp.) APPLES: Powdery mildew (<i>Podosphaera leucotricha</i>)	35 ml/100 ℓ water	Apply Luna Experience as part of a preventative spray programme. Such a programme should start from the green tip stage of the trees with spray intervals of 7 - 10 days before flowering and 10 - 14 days after flowering. Although Luna Experience can be included during any time of the spray programme, it is advisable to position Luna Experience between flowering and fruit set in order to achieve optimum control. Apply a maximum of 3 sprays per season. STRICTLY ADHERE TO THE FRAC GUIDELINES (SEE THE RESISTANCE MANAGEMENT CLAUSE).
<p>NOTE: Ensure that the correct amount of fungicide is applied per hectare. This is calculated from the tree row volume (TRV) formula (see below).</p> <p>High Volume:</p> <p>The water volume to be applied per hectare must be calculated according to the TRV formula:</p> $\ell/\text{ha} = \frac{\text{Tree height} \times \text{Tree diameter} \times 937}{\text{Row width}}$ <p>The TRV calculation is the water volume required when the trees are in full leaf. Use the water volume required per hectare to calculate the amount of Luna Experience required per hectare according to the various growth stages of a tree during the season.</p> <p>Water requirements per hectare as recommended according to the following different growth stages of a tree:</p>

Maak die spuittenk half vol met skoon water. Skud die **Luna Experience** houër deeglik onmiddellik voor gebruik. Voeg die benodigde hoeveelheid produk by die water in die tenk terwyl geroer word.

Vorbereide spuitmengsels van **Luna Experience** moet nie vir enige tydskuur in die spuittenk gelaat word nie, bv. oornag. Verseker dat die spuitmengsel deeglik geroer word indien kort onderbrekings van die spuitproses plaasgevind het, bv. etenstyd.

TOEDIENINGSTEGNIEKE:

Grondtoediening

Luna Experience mag met konvensionele spuitapparaat toegedien word. Kalibreer die spuitapparaat voor toediening om te verseker dat die regte dosis gelewer word. Die verspreiding van die spuit volume moet egalig oor die teikengebied wees.

TOEDIENINGSTABEL:

GEWAS/SIEKTE	TOEDIENINGS HOEVEELHEID	OPMERKINGS
APPELS EN PERE Skurfsiekte (<i>Venturia</i> spp.) APPELS: Poeieragtige skimmel (<i>Podosphaera leucotricha</i>)	35 ml/100 ℓ water	Dien Luna Experience as deel van 'n voorkomende spuitprogram toe. So 'n program behoort in aanvang te neem vanaf die groenpunt stadium van die bome met spuit intervale van 7 to 10 dae voor blom en 10 tot 14 dae na blom. Alhoewel Luna Experience ten enige tyd van die spuitprogram toegedien kan word, is dit raadsaam om toediening tussen blomstadium en vrugset te posisioneer vir optimale beheer. Dien 'n maksimum van 3 bespuitings per seisoen toe. DIE FRAC RIGLYNE MOET STRENG NAGEKOM WORD (SEIN DIE WEERSTANDBESTUUR KLOUSULE).
NOTA: Verseker dat die korrekte hoeveelheid swamdoder per hektaar toegedien word. Dit word volgens die boomryvolume (BRV) formule bereken (sien onder).		
Hoë Volume: Die watervolume wat per hektaar toegedien word, moet volgens die BRV formule bereken word: ℓ/ha = Boomhoogte X Boomdeursnit X 937 Rywydte		
Die BRV berekening gee die watervolume wat benodig word wanneer die bome in volle blad is. Gebruik die watervolume per hektaar om die hoeveelheid Luna Experience te bereken wat per hektaar benodig word tydens die verskillende groeistadia van 'n boom gedurende 'n seisoen.		
Watervolumes per hektaar soos aanbeveel volgens die volgende verskillende groeistadia van 'n boom:		
Groeistadium	% Hoë volume waterbehoefte/ha	
Vanaf groenpunt tot ± 30 % blom	60 %	
Vanaf ± volblom tot ± middel November	80%	
Vanaf ± begin Desember	100%
