RESISTANCE WARNING:
For resistance management, **Luna Privilege** is a group code 7 fungicide. Any fungus population may contain individuals naturally resistant to **Luna Privilege** and other group code 7 fungicides. The resistant individuals can eventually dominate the fungus population if these fungicides are used repeatedly. These resistant fungi may not be controlled by **Luna Privilege** or any other group code 7 fungicides.

To delay fungicide resistance:
- Avoid exclusive repeated use of fungicides from the same fungicide group code.
- Use the recommended rate and do not extend spray intervals (where applicable) beyond label specifications as per “Application Table.”
- Alternate with registered products from different fungicide group codes. Refer to the relevant labels for full details.
- Integrate other control methods (chemical, cultural, biological) into disease control programs.

For specific information on resistance management contact the registration holder of this product.

DIRECTIONS FOR USE: USE ONLY AS DIRECTED.

NOTE:

1. High volume application on grapes:
   Apply **Luna Privilege at the following water volumes and ensure** even coverage.

Botrytis rot:

Growth Stage	Water volume ℓ/ha	
	Wine grapes	**Table grapes**
Blossom to pea-size stage of the berries	725	725

Powdery mildew:

Growth Stage	Water volume ℓ/ha

2.5 cm shoot length to pea-size stage of the berries	250 - 1 000	500 - 1 500

2. Low volume application on grapes:
   Luna Privilege can be applied as a low volume application. The volume of product needed per hectare should be calculated from the corresponding high volume application rate. The concentration of the spray mix should not exceed four times (4X). On wine grapes apply in at least 250 ℓ/ha. Ensure even coverage. On table grapes for sprays at the start of ripening and shortly before harvest apply in 500 - 700 ℓ water/ha with a suitably calibrated mist blower up to the point of run-off ensuring even coverage and delivery of a droplet spectrum with a VMD of 150 - 200 µm. Sprays should not be applied past the point of run-off on the berries. The volume of product needed per hectare should be calculated from the high volume application rate applicable to the particular vineyard at that growth stage.

3. SDHI-containing fungicides:
- The total number of SDHI fungicides per year for all diseases, solo or in mixture with effective mixing partners from different cross-resistance groups, shall not be more than 50% of the total number of applications.

No applications of **Profiler** are allowed when **Luna Privilege** is applied for Botrytis rot. If **Profiler** is used for downy mildew control, a **Luna Privilege** application for Botrytis rot is not allowed.
- For the control of **Powdery mildew and Downy mildew**: One (1) **Luna Privilege** application at registered rate of 10 mℓ /100 ℓ and one (1) **Profiler** application @ 225 g / 100 ℓ are allowed, not later than berries groat-sized stage. WEERSTANDSBESTUUR:
Luna Privilege is 'n groepkode 7 swamdoder. Enige populasie van 'n spesifieke swam mag individue insluit wat 'n natuurlike weerstand teen **Luna Privilege** of enige ander groepkode 7 swamdoder het. Indien hierdie swamdoders herhaaldelik aangewend word kan die weerstandbiedende individue uiteindelik die swampopulasie oorheers. Hierdie weerstandbiedende swamme sal waarskynlik nie deur **Luna Privilege** of enige ander groepkode 7 swamdoder beheer word nie.

Om weerstand teen swamdoders te vertraag:
- Vermy die eksklusiewe herhaaldelike gebruik van swamdoders in dieselfde swamdoder groepkode.
- Verwys na die "Toedieningstabel" vir die aanbevole dosis en moet nie die spuitintervalle oorskry nie.
- Wissel af met geregistreerde produkte in verskillende swamdodergroepkodes. Verwys na die betrokke etiket vir volle besonderhede.
- Integreer ander beheermaatreëls (chemies, verbouing, biologies) in siekte-beheer-programme.

Vir spesifieke inligting oor weerstandsbestuur kontak die registrasiehouer van hierdie produk.
