## Fungicide

A suspension concentrate fungicide with mesostemic properties for the control of the diseases mentioned on the crops listed.

contains:  
Fenhexamid (hydroxyanilide)

RSA/1222/Teldor 500SC/Sales Panel  
Code: ZA84894214G

**WARNINGS:****HAZARD STATEMENTS:**

- Toxic to aquatic life with long lasting effects
- Contains 1,2-benzisothiazolin-3-one, 4-amino-2,3-dichlorophenol, reaction mass of 5-chloro-2-methyl-2H-isothiazol-3-one and 2-methyl-2H-isothiazol-3-one (3:1). May produce an allergic reaction

- **BLUEBERRIES:** ALLOW 3 DAYS BETWEEN LAST APPLICATION AND HARVEST.
- **RASPBERRIES:** ALLOW 1 DAY BETWEEN LAST APPLICATION AND HARVEST.
- **WINE GRAPES:** ALLOW 7 DAYS BETWEEN LAST APPLICATION AND HARVEST.
- **TABLE GRAPES:** ALLOW 3 DAYS BETWEEN LAST APPLICATION AND HARVEST.

**NOTE:** The recommended withholding period between last application and harvest meets local residue requirements but may not meet export requirements. If the treated crop is intended for the export market, consult the relevant exporting body before application of the product, regarding pre-harvest interval requirements.

**Teldor 500 SC** has been tested on the following table grape cultivars:

**PRECAUTIONS:****PRECAUTIONARY STATEMENTS:**

- Wear protective gloves/ protective clothing/ eye protection/ face protection.

- Do not inhale fumes or spray mist.
- Wash contaminated clothing daily.
- Wash with soap and water after use.
- Do not eat, drink or smoke whilst mixing, applying or before washing hands and face.
- Avoid drift of spray onto other crops, grazing, rivers, dams and areas not under treatment.
- Clean applicator after use, dispose of wash water where it will not contaminate crops, grazing, rivers and dams.
- Rinse empty container three times with a volume of water equal to at least one tenth of that of the container and add the rinsings to the contents of the spray tank before disposing of the container in the prescribed manner.
- Destroy empty container by perforation and flattening and never use for any other purpose.
- Prevent contamination of food, feeds, drinking water and eating utensils.

**RESISTANCE MANAGEMENT:**

For resistance management, **Teldor 500 SC** is a group code 17 fungicide. Any fungus population may contain individuals naturally resistant to **Teldor 500 SC** and other group code 17 fungicides. The resistant individuals can eventually dominate the fungus population if these fungicides are used repeatedly. These resistant fungi may not be controlled by **Teldor 500 SC** or any other group code 17 fungicides.

To delay fungicide resistance:

- Avoid exclusive repeated use of fungicides from the same fungicide group code. Do not apply more than THREE sprays of **Teldor 500 SC** per season. Alternate with registered products from different fungicide group codes e.g. **Scala** (Reg. No. L4972). Refer to the relevant label for full details.
- Integrate other control methods (chemical, cultural, biological) into disease control programs.

For specific information on resistance management contact the registration holder of this product.

**DIRECTIONS FOR USE:** USE ONLY AS INDICATED.

**COMPATIBILITY:**

**Teldor 500 SC** can be used on grapes in tank mixtures with any one of the following: **Prosper 500 EC** (Reg. No. L6252), **Milraz 76 WP** (Reg. No. L2879), **Melody Care 66,75 WG** (Reg. No. L6715), **Dithane WG** (Reg. No. L4213), **Flowerable Sulphur** (Reg. No. L142), **Kumulus 80 WG** (Reg. No. L4192), **Demidex** (Reg. No. L5094) and **Thionex SC** (Reg. No. L4671). Tank mixtures of **Teldor 500 SC** with other products are not recommended. Low volume sprays on table grapes should not be applied as tank mixtures with any other products. Bayer [Pty] Ltd., however, does not accept responsibility for the crop tolerance of tank mixtures where the formulations of products have changed.

Allow 7 days between the application of **Teldor 500 SC** and a dust application or products not listed above and do not apply **Teldor 500 SC** in combination with wetter/stickers or as a tank mixture with trace or macro element sprays in grapes.

**MIXING INSTRUCTIONS:**

Pour the required quantity of **Teldor 500 SC** into the water while agitating. Do not allow the **Teldor 500 SC** spray mixture to stand any length of time before using.

**APPLICATION TABLE:**

CROP/DISEASE	DOSAGE RATE	REMARKS
<b>BLUEBERRIES</b> <i>Botrytis rot (Botrytis cinerea)</i>	75 ml/100 ℥ water	Apply <b>Teldor 500 SC</b> as a high volume full cover spray. <b>Teldor 500 SC</b> can be applied at flowering, pea size stage, ripening and/or shortly before harvest. <b>Do not apply more than 3 of the above mentioned sprays of Teldor 500 SC per season.</b> As part of a resistance strategy, <b>Teldor 500 SC</b> must be preceded and/or succeeded with botryticides with different modes of action. (Non-related chemical Group Code).

CROP/DISEASE	DOSAGE RATE	REMARKS
<b>RASPBERRIES</b> <i>Botrytis rot (Botrytis cinerea)</i>	75 ml/100 ℥ water	Apply <b>Teldor 500 SC</b> as a high volume full cover spray at flowering as two consecutive applications with a 7 day spray interval. <b>Teldor 500 SC</b> can also be applied at the start of ripening and/or shortly before harvest when climatic conditions favour <i>Botrytis</i> development. <b>Do not apply more than 3 of the above mentioned sprays of Teldor 500 SC per season.</b> As part of a resistance strategy, rotate <b>Teldor 500 SC</b> with registered botryticides with different modes of action. (Non-related chemical Group Code).
<b>TABLE GRAPES</b> <i>Botrytis rot (Botrytis cinerea)</i>	75 ml/100 ℥ water (750 ml-1125 ℥/ha)	Apply at flowering and the pea size stage of the berries as a high or low volume spray (see NOTES). <b>Teldor 500 SC</b> can also be applied at the start of ripening and shortly before harvest as a low volume spray application in 500-700 ℥ water/ha with a suitably calibrated mistblower delivering a droplet spectrum with a VMD of 150-200 µm. Sprays should not be applied past the point of run-off on the berries. <b>Do not apply more than 3 of the above mentioned sprays of Teldor 500 SC per season.</b> For the control of <i>Botrytis</i> at growth stages not mentioned, use registered botryticides with different modes of action.

CROP/DISEASE	DOSAGE RATE	REMARKS
<b>WINE GRAPES</b> <i>Botrytis</i> rot ( <i>Botrytis cinerea</i> )	75 mL/100 ℥ water (563 mL-1125 mL/ha)	Sprays can be applied at the full blossom stage, at the pea size stage of the berries, at the start of ripening ( <i>véraison</i> ) or shortly before harvest. <b>Do not apply more than 3 of the above mentioned sprays of Teldor 500 SC per season.</b> For the control of <i>Botrytis</i> at growth stages not mentioned, use registered botryticides with different modes of action.

2. Low volume application on grapes:

**Teldor 500 SC** can be applied as a low volume application. The volume of product needed per hectare should be calculated from the corresponding high volume application rate. The concentration of the spray mix should not exceed four times (4X). On wine grapes apply in at least 250 ℥/ha. Ensure even coverage. On table grapes for sprays at the start of ripening and shortly before harvest apply in 500-700 ℥ water/ha with a suitably calibrated mistblower up to the point of run-off ensuring even coverage and delivery of a droplet spectrum with a VMD of 150-200 µm. Sprays should not be applied past the point of run-off on the berries. The volume of product needed per hectare should be calculated from the high volume application rate applicable to the particular vineyard at that growth stage.

© Bayer (Pty) Ltd. All unauthorised reproduction of this label is forbidden.

**NOTES:**

1. High volume application on grapes:

Spray to the point of run-off ensuring even coverage. Depending on the leaf area present, 750-1 500 ℥ spray mixture should be applied per hectare as follows:

Growth stage	Water volume ℥/ha	
	Wine grapes	Table grapes
Blossom to pea-size stage of the berries	750-1 000	1 000-1 500
Berries at pea-size stage up to harvest	1 000-1 500	See NOTE 2 Low volume application

## WAARSKUWINGS:

### GEVAARVERKLARINGS:

- Giftig vir waterlewende organismes met langdurige gevolge.
- Bevat 1,2-benzisothiazolin-3-one, 4-amino-2,3-dichlorophenol, reaction mass of 5-chloro-2- methyl-2H-isothiazol-3-one and 2-methyl-2H-isothiazol-3-one (3:1). Mag allergiese reaksie veroorsaak.

### VOORSORGMAATREËLS:

#### VOORSORGSGVERKLARINGS:

- Dra besoedelde handskoene/beskermende klere/oogbeskerming/gesigbeskerming.

- Verhoed inaseming van dampe en sputtmis.
- Was besoedelde klere daagliks.
- Was met seep en water na gebruik.
- Moet nie eet, drink of rook tydens vermenging, toediening of voordat hande en gesig gewas is nie.
- Verhoed wegdrywing van sputtstof na ander gewasse, weiding, riviere, damme of areas nie onder behandelning nie.
- Maak sputtapparaat skoon na gebruik, raak ontslae van uitspoelwater waar dit nie gewasse, riviere en damme kan besoedel nie.
- Spoel lêer houer drie keer uit met 'n volume water gelyk aan ten minste een tiende van die houer en voeg die uitspoelwater by die inhoud van die sputtenker voordat van die houer op die voorgeskrewe metode ontslae geraak word.
- Vennietig lêer houer deur gate in te maak en plat te slaan. Moet vir geen ander doel weer gebruik nie.
- Voorkom besoedeling van voedsel, voer, drinkwater en eetgerei.

### WEERSTANDSBESTUUR:

**Teldor 500 SC** is 'n groepkode 17 swamddoder. Enige populasie van 'n spesifieke swam mag individue insluit wat 'n natuurlike weerstand teen **Teldor 500 SC** of enige ander groepkode 17 swamddoder het. Indien hierdie swamddoders herhaaldelik aangewend word kan die weerstandbiedende individue uiteindelik die swampopulasie oorheers. Hierdie weerstandbiedende swamme sal waarskynlik nie deur **Teldor 500 SC** of enige ander groepkode 17 swamddoder beheer word nie.

Om weerstand teen swamddoders te vertraag:

- Verminder die eksklusieve herhaaldelike gebruik van swamddoders in dieselfde swamddoder groepkode. Moet nie meer as **DRIE Teldor 500 SC** bespuittings per seisoen toedien nie. Wissel af met geregistreerde produkte in verskillende swamddoder groepkodes bv. **Scala** (Reg. Nr. L4972). Verwys na die betrokke etiket vir volle besonderhede.
- Integreer ander beheermaatreëls (chemies, verbouing, biologies) in siekte beheer programme.

**Vir spesifieke inligting oor weerstandsbestuur kontak die registrasiehouer van hierdie produk.**

**GEBRUIKSAANWYSINGS:** GEBRUIK SLEGS SOOS AANGEDUI.

#### **VERENIGBAARHEID:**

Teldor 500 SC kan op wingerd in tenkmengsels met enige een van die volgende gebruik word: **Prosper 500 EC** (Reg. Nr. L6252), **Miraz 76 WP** (Reg. Nr. L2879), **Melody Care 66,75 WG** (Reg. Nr. L6715), **Dithane WG** (Reg. Nr. L4213), **Flowable Sulphur** (Reg. Nr. L142), **Kumulus 80 WG** (Reg. Nr. L4192), **Demidex** (Reg. Nr. L5094) en **Thionex SC** (Reg. Nr. L4671). Tenkmengsels van **Teldor 500 SC** met ander produkte word nie aanbeveel nie. Lae volume bespuittings op tafeldruwe moet nie as tenkmengsels met enige ander produktes toegedien word nie. Bayer (Edms) Bpk. aanvaar egter nie verantwoordelikheid vir die plantverdraagsaamheid van tenkmengsels nie indien die formulasies van die produktes verander het nie.

Laat 7 dae toe tussen die toediening van **Teldor 500 SC** en 'n bestuiving of produktes nie hierbo genoem nie. Moenie **Teldor 500 SC** saam met benattings-/kleefmiddels of in 'n tenkmengsel saam met spoor-of makro-element bespuittings op wingerd toedien nie.

#### **MENGINSTRUKSIES:**

Voeg die nodige hoevelheid **Teldor 500 SC** by die water terwyl dit geroer word. Moenie toelaat dat die **Teldor 500 SC** spuitmengsel vir enige tydsduur staan voor gebruik nie.

#### **TOEDIENINGSTABEL:**

<b>WYNDRIUIWE</b> <i>Botrytis</i> verrotting ( <i>Botrytis cinerea</i> )	75 ml/100 ℥ water (563 ml-1125 ml/ha)	Bespuittings kan toegedien word by die vol blomstadium, by ertjiekorrelgrootte van die korrels, by begin van rypwording (véraison) of net voor oes. <b>Moet nie meer as drie van die bogenoemde bespuittings van Teldor 500 SC per seisoen toedien nie.</b> Om <i>Botrytis</i> in groeistadia nie hier genoem nie te beheer, gebruik geregistreerde <i>Botrytis</i> -beherende swamdoders met 'n ander werkswyse.

#### NOTAS:

##### 1. Hoë volume toediening op druwe:

Spuit tot die punt van afloop en verseker egalige bedekking. Afhangende van blaaroppervlakte sal 750-1 500 ℥ spuitmengsel per hektaar benodig word soos volg:

Groeistadium	Water volume ℥/ha	
	Wyndriuiwe	Tafeldriuiwe
Blomstadium tot ertjiekorrelgrootte stadium	750-1 000	1 000-1 500
Ertjiekorrelgrootte stadium tot oes	1 000-1 500	Sien NOTA 2 Lae volume toediening

##### 2. Lae volume toediening op druwe:

**Teldor 500 SC** kan ook toegedien word as 'n lae volume bespuiting. Die hoeveelheid produk benodig per hektaar moet bereken word van die dienooreenkomsing hoë volume toedieningshoeveelheid. Die konsentrasie van die spuitmengsel mag nie vier keer (4X) die konsentrasie oorskry nie. Dien 'n spuitvolume van ten minste 250 ℥/ha toe op wyndriuiwe. Verseker egalige bedekking. Op tafeldriuiwe vir bespuittings by die begin van ryp word en kort voor oes dien toe in 500-700 ℥ water/ha met 'n toepaslik gekalibreerde newelblaser tot die punt van afloop en verseker egalige bedekking. 'n Druppel spektrum met 'n VMD van 150-200 µm moet gelewer word. Bespuittings moet nie verder as die punt van afloop op die korrels toegedien word nie. Die volume produk benodig moet bereken word van die hoë volume toedieningshoeveelheid benodig vir die betrokke wingerd op die spesifieke groeistadium.
