

VELUM®

Velum® Nematicide/Fungicide *Group 7 Fungicide - Peanuts*

Velum® (Fluopyram) from Bayer is a nematicide/fungicide for peanut growers to apply early in the season to help maximize yield potential through suppression of nematodes and diseases. Velum helps to manage a wide spectrum of yield-robbing nematodes and brings long-lasting suppression.

/// SOLUTION FOR POST-PLANTING PROTECTION

Fluopyram, the active ingredient in Velum® nematicide/fungicide works to combat nematodes and damaging diseases. Once applied, it moves from roots to leaves, not only suppressing nematodes below ground but also moving throughout the plant to help promote overall plant health and suppress key diseases maximizing yield potential.

Velum is not intended as a replacement for fumigants and can be used with other nematode management practices and chemistries.

/// BENEFITS

- Promotion of root health
- Helps maximize yield potential
- Wide-spectrum nematicidal activity
- Suppresses key diseases
- Ease of application
- Part of a complete nematode management program

Peanut Pest Suppression

- Nematodes
- Aspergillus Crown Rot
- Early Leaf Spot
- Late Leaf Spot
- Southern Stem Rot (white mold)

/// THE NEMATODE PROBLEM

Nematodes are an invisible threat that can negatively impact soil health and harm peanuts.

Symptoms of nematodes include:

- Root damage
- Wilting and stunted growth
- Disease transmission
- Reduced crop yield

/// THE RESULTS ARE CLEAR WITH VELUM® NEMATICIDE/FUNGICIDE

Trial data throughout the United States has shown higher yield potential for crops treated with Velum compared to untreated crops, due to successful nematode management with Velum.

/// VELUM® NEMATICIDE/FUNGICIDE QUICK FACTS

- **Active Ingredient:** Fluopyram
- **FRAC:** Group 7 Fungicide
- **Signal Word:** Caution
- **REI:** 12 hours
- **PHI:** 7 days for peanuts
- **Peanut Use Rate:** 6.5 - 6.84 fl oz/A
- Doesn't control early season insects such as thrips

/// HOW VELUM® NEMATICIDE/ FUNGICIDE WORKS

- Mitochondria are essential for cellular energy production.
- Fluopyram, the active ingredient in Velum® nematocide/ fungicide, selectively inhibits Complex II of the mitochondrial respiratory chain in the mitochondria of nematodes and fungi. In nematodes, this results in immobility and death.

Velum® Nematicide/Fungicide In-Furrow At Planting in Peanuts

Grower near Stony Creek, VA accidentally switched off his IFAO applicator on four rows. 54 DAP Photo taken on 6/28/18 approximately 40-50 days after planting

/// PEANUT RESTRICTIONS

- Do not apply more than 13.7 fl oz of Velum® nematocide/ fungicide per acre per year.
- Do not apply Velum within 30 days of harvest, (*spray and soil applications*).
- Regardless of formulation or method of application, apply no more than 0.45 lb/A of fluopyram per year, including seed treatment, soil and foliar uses.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. Performance may vary, from location to location and from year to year, as local growing, soil and environmental conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on their growing environment. The recommendations in this material are based upon trial observations and feedback received from a limited number of growers and growing environments. These recommendations should be considered as one reference point and should not be substituted for the professional opinion of agronomists, entomologists or other relevant experts evaluating specific conditions. Not all products are registered for use in all states and may be subject to use restrictions. The distribution, sale, or use of an unregistered pesticide is a violation of federal and/or state law and is strictly prohibited. Check with your local dealer or representative for the product registration status in your state. Bayer, Bayer Cross and Velum® are registered trademarks of Bayer Group.
